

Prospecting Check Report ID: 566

Prospecting Checks are conducted by business Start Your Own Gold Mine in East Africa. Our website is <https://www.StartYourOwnGoldMine.com> - each of our companies in East Africa retains records in form of Prospecting Check Reports.

Prospecting code: 2021-12-17-JL-001

Mining land ID: 397, Code: Uganda

Location ID: 5466, SYOGM Kamusenene

Responsible Contact (Reporter) ID: 1, Jean Marc Louis

Prospecting shaft or location: Shaft on the hill 3 km from Kamusenene

Prospecting depth: 54.86

Prospecting quantity: 16.57 x kg

Prospecting quality: Visually estimated 0.02 grams

Description: Sample has been brought personally from shafts on the hill, from the specific location. Rocks and sand has been classified, dried on sand and then separately processed on

The sample has been grinded dry by using rock impact mill. Then it was processed on small 2 meters sluice with vortex matting. Sluice recovered most of gold, while some gold was lost in tailings, it was recovered by panning. According to visual estimate, there is 0.02 grams containing mostly Moderately Fine Gold and Extremely Fine Gold. None of the available weigh scales could measure the sample. 16.57 kg is 60.35 contained in 1000 kg.

We can then estimate the recoverable gold grade to be $0.02 \times 60.35 = 1.20$ grams per tonne.

Recoverable gold grade would be the gold that we may recover with our equipment.

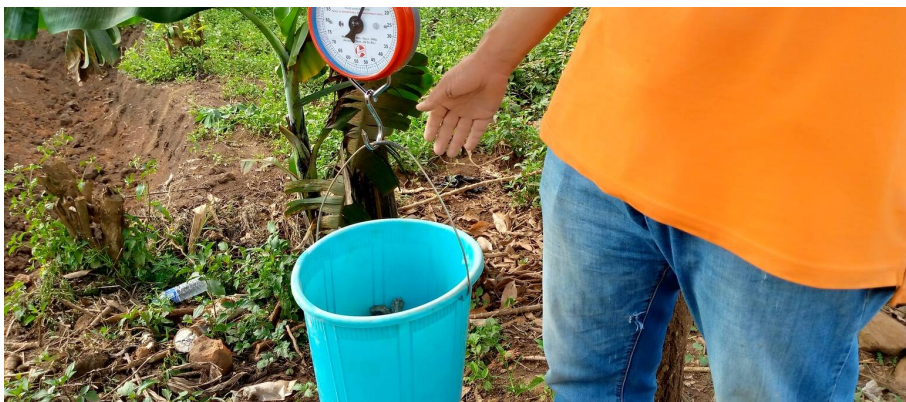

Prospecting date and time: 2021-11-17, 15:00 - duration: 2 hours, minutes: 30

Prospecting method ID: 15 - Narrow sluice for super concentrate with vortex matting only

Prospecting method description: This is narrow sluice long almost 2 meters used for super concentrate. In this method sluice is used with the vortex matting only, meaning that very fine gold particles may be lost. It is good enough to test for gold presence after grinding of rocks.

Any additional participants: ID: 21568, Seid Arnaut, ID: 316096, Seberwa Yanne, ID: 316178, James Okedi, ID: 319842, Esther Ahimbisiibwe, ID: 361775, Muhammad Kyeyune, ID: 361776, Eva Kyobweine, ID: 361777, Kyeyune, ID: 361983, Nasif Senyonga,

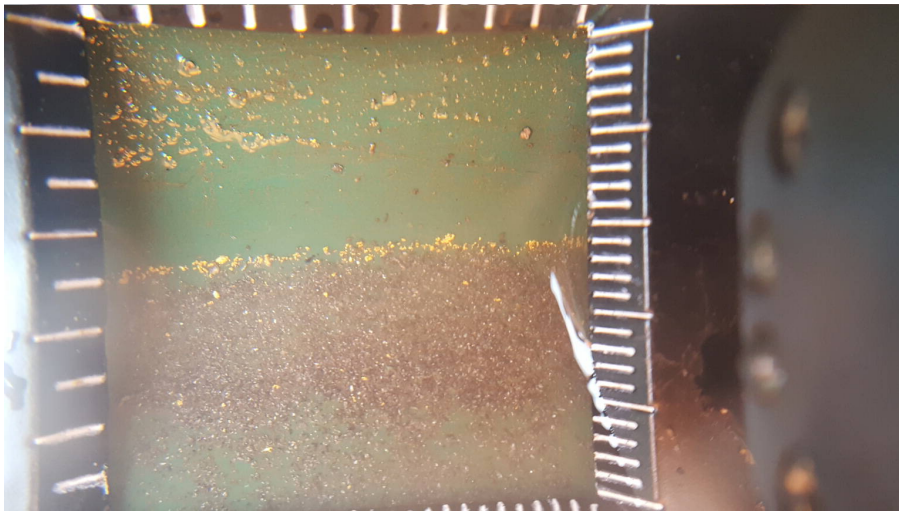

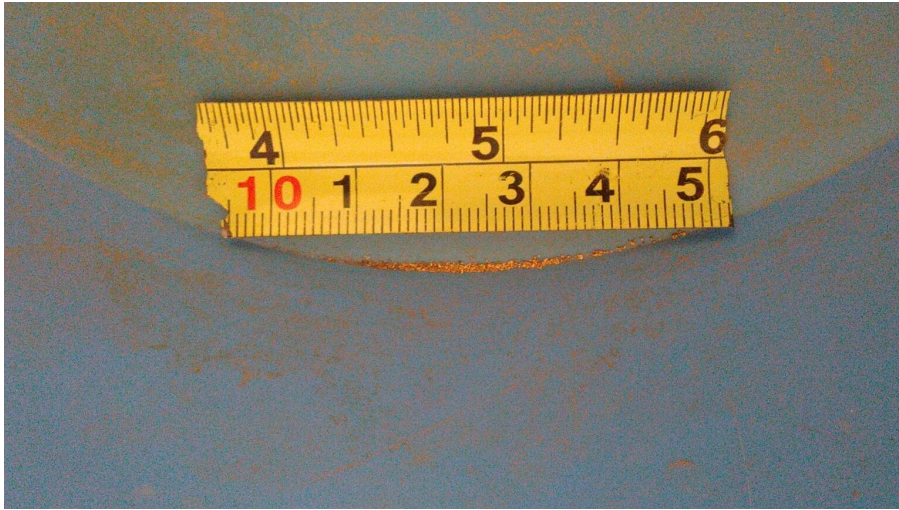

Any related pictures:

Conclusion: Rock with this quantity of gold represents profitable ores. It shall be excavated and processed by minimizing all expenses.

It is recommended to continue further sampling of rocks found in the shaft until better gold grade may be found.

Information about us

Managing company Thetabiz Corporation d.b.a. Start Your Own Gold Mine is part of the group of companies: Start Your Own Gold Mine LLC, Colorado, USA, Start Your Own Gold Mine Limited in Tanzania, Goldivanti Gold Limited in Uganda. More than 350+ mining sites available for gold mining in Tanzania, Uganda, Kenya, Rwanda and few in West Africa.
